ANTI-ICE
ADDITIVE
PUMP

BULLETIN 113
(10-09)

HAND PUMP FOR ANTI-ICING ADDITIVE

(ALSO KNOWN AS PRIST® OR DIEGME)

- Save money by purchasing additive in 55-gallon drums instead of 5-gallon cans
- Fill your reservoir with minimal exposure of personnel
- No heavy 5-gallon cans to lift
- Special non-drip hose-end check valve
- Seals and hose are compatible with anti-icing additive

Handling anti-icing additives such as PRIST® can be dangerous because of the hazardous nature of the chemical. We offer a hand pump equipped with special seals for use with DIEGME additive. We also include a special hose and anti-drip fill valve for safe handling. The hose is 12' long.

We also offer a choice of several rugged heavy-gauge stainless steel reservoir tanks with built-in level gauges. Plastic tanks and the additive itself will burn in a fire. These tanks are designed for safe storage of DIEGME additive.

All tanks are 300-series stainless steel. A drain plug is located at the bottom. Filling port is covered by a heavy stainless pipe cap with vent connection for a desiccant dryer.

We also are your source for additive injection systems for any application. Flow rates from 10 to 10,000 GPM. Call for further information or contact your distributor.

NOTE: Store additive drums indoors or cover to prevent water from gathering on drum top. This water can contaminate the additive.
